Client Name : IFFL Finance Andheri
Job Details

This role is primarily focused on full-stack development, with opportunities to apply practical AI skills to enhance product features and internal workflows.
Responsibilities
Build, enhance, and maintain responsive applications across frontend and backend.
Develop reusable UI components and integrate them with backend APIs.
Design, implement, and maintain RESTful APIs, databases, and application services.
Collaborate with product, design, and engineering stakeholders to deliver features on schedule.
Write clean, tested, maintainable code and participate in code reviews.
Diagnose and resolve defects, performance issues, and integration problems.
Support deployment, monitoring, and ongoing improvements to production applications.
Integrate AI-powered capabilities such as LLM APIs, chat features, content generation, search, summarization, or workflow automation.
Help evaluate and improve the reliability, cost, and user experience of AI-enabled features.
Required Skills

Full-Stack Development
Around 2 years of hands-on experience in full-stack web development.
Experience with a modern frontend framework such as React, Angular, or Vue.js.
Experience with backend development using Node.js, Python, Java, .NET, or a similar stack.
Familiarity with REST APIs, authentication, authorization, and third-party integrations.
Working knowledge of relational and/or NoSQL databases, such as PostgreSQL, MySQL, MongoDB, or Redis.
Understanding of Git-based version control, code reviews, and agile development practices.
Familiarity with cloud deployment and CI/CD fundamentals is desirable.
AI Skills
Basic practical experience integrating AI or LLM APIs, such as OpenAI, Azure OpenAI, Gemini, or similar platforms.
Familiarity with prompt design, structured outputs, and handling AI responses safely in applications.
Exposure to RAG, embeddings, MCPs, vector databases, or AI agents is a plus.
Ability to evaluate AI feature quality and manage considerations such as latency, cost, privacy, and hallucinations.
Preferred Qualifications
Experience building SaaS, enterprise, or customer-facing applications.
Exposure to modern AI application frameworks such as LangChain, LlamaIndex, or equivalent.
Good problem-solving skills, ownership, and ability to work effectively in a fast-paced contract engagement.
